

Introducing the
Dalco Metals

✦ Stretcher-Leveler

WHAT IS IT?

The Dalco Metals Stretcher-Leveler is a technologically advanced machine that produces memory-free sheets up to 0.25" thick, through 75" wide, and as long as 240 inches.

HOW DOES IT WORK?

The Dalco Metals Stretcher-Leveler exerts over 2 million pounds of force to elongate the entire cross-section of strip from top-to-bottom and side-to-side, just beyond its yield point. Thereby, the steel's internal stress is relieved and coil memory completely removed.

WHAT IS THE BENEFIT TO YOU?

Eliminating coil memory means your equipment can run faster and more consistently, which means you can run "lights out" with fewer interruptions and:

- Faster more profitable production
- Less downtime
- Superior reliability
- Stronger bottom line

ABOUT DALCO METALS

Dalco Metals is the premier supplier of flat-rolled steel-processing services in the Midwest and nearby states. We have grown our business by providing intelligent and attentive service throughout the sales cycle. This adds value to the processed steel we supply because you can depend on service, reliability, and consistency.

We work closely with our mill suppliers to ensure that we deliver the right material for your specific industrial application, paying close attention to every step of the supply chain.

Family owned since 1973, we take pride in closely managing our growth, ensuring that we give our full attention to every job and build our business around our core strengths: service, reliability, and consistency.

We not only guarantee that the steel you receive from Dalco will be of the highest quality and processed precisely to your specifications; it will also be “memory-free” from crossbow, edgewave, and center-buckle so that your laser and precision plasma processes can be worry free.
